

Make a temporary installation (without removing the adhesive backing tape) before installing permanently by holding the strip in place with removable tape. Check the position, light effect, required length, remote control and power connection of the LED strip.

DO NOT POWER
the strip in the packaging reel

IP20
Install indoor only - Keep dry

WITH THE POWER DISCONNECTED
only cut the strip at cutting points

Installation Guide

PLEASE NOTE: Ensure power is NOT connected before proceeding

1. Choose a suitable indoor, dry, clean, solid and smooth surface for the strip. Avoid sandy, rough and flexible surfaces. Ensure the temperature of the strip is at least 10°C before installation. Remove any dust and wipe the surface line with the provided alcohol pad (Fig. 1). If the strip requires cutting, only cut the strip with a suitable tool at the cuttings points with the power off.
2. Once you have checked the position of the strip and power connection, with the power OFF, carefully apply the strip to the surface by continuously removing a portion of the adhesive backing tape as required (Fig. 2).
3. Stick the strip and carefully press down on the strip for about 10secs (avoid pressing on the LEDs) (Fig. 3).
4. For a durable and secure installation, add the provided clips and screws approx. 1m apart (Fig. 4). Alternative screw fittings may be required depending on the surface.
5. Connect the receiver module of the strip to the supplied plug (Fig. 5). Do NOT use a different plug. Then connect the plug to the mains. Now the strip is ready to operate.

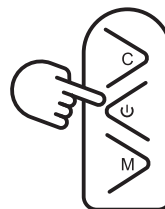

Remote Control

Remove the tab at the bottom of the remote to power the battery

1. Brightness+ / Dynamic Mode Speed+ / Music Mode Sensitivity+
2. Brightness- / Dynamic Mode Speed- / Music Mode Sensitivity-
3. Turn ON
4. Turn OFF
5. Static colours
6. Dynamic modes
7. Music modes

Note: Do not use it in humid, high temperature environment.

WARNING:
BUTTON BATTERY INCLUDED
KEEP AWAY FROM CHILDREN

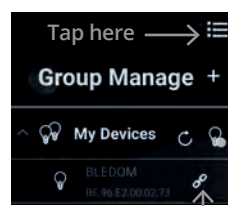

Receiver Control

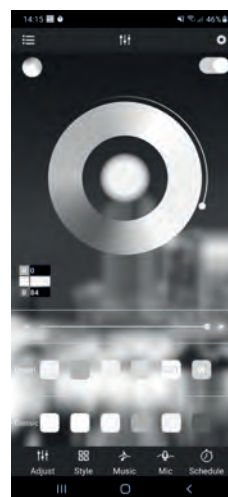

Manual control by 3 Buttons

- C Cycle through static/dynamic modes
- U Click on/off
- M Red Light and Music Mode

App Control

Unbroken link
Connection successful

- Download Ehome Light App by QR code or search on Google Play/App Store.
- Enable Bluetooth on your phone before using the app. Android users must also enable Location.
- LED strip will appear as BLEDOM with an unbroken link icon in the settings part of the app when connected.
- Follow the user interface of the app to control the strip.
